

digitalID series

digID mini

- The most portable live scan on the market
- Single USB connection for data/power/control
- FBI certified, forensic-quality scans
- Streamlined for quick and easy capture
- Most environmentally friendly device on the market

digID mini

EXCEEDS GLOBAL INDUSTRY STANDARDS

The digID mini is a high resolution ten-print fingerprint scanner made for background checks in all markets around the world. Designed and built for optical perfection, it exceeds even the most stringent FBI requirements.

THE WORLD'S MOST PORTABLE LIVE SCAN DEVICE

With a tiny footprint, zero moving parts, and a rugged, polymer casing, the digID mini was built to go anywhere. Don't worry about finding a place to plug in, the digID mini is powered off of a single USB cable; as long as you have a laptop, you have power. Measuring 4.75" tall, 5.9" wide and 6.0" deep, the mini mounts easily into any stationary system. At less than 4 pounds, it is the lightest in the industry.

ALWAYS PERFECT SCANS

The digID mini is made from high-quality optical components for unprecedented clarity in scans. The green spectrum light source allows for use under any light, or no light at all. When bundled with i3's inVizeID software the scanner auto-calibrates and provides the operator immediate feedback.

EASY TO OPERATE

No buttons, no confusion. Our unique auto capture system makes the digID mini easy to operate even for a novice user. LEDs guide operators through each step of the fingerprinting process. A new ergonomically contoured design makes even the hardest to print people seem simple.

THE I3 DIFFERENCE

Identification International Incorporated was the first fingerprint scanner manufacturer to receive certification from the FBI. Founded and run by former optics industry leaders, all our products are engineered to capture the quickest scans with the best quality possible. Our products are the only live scan devices on the market entirely manufactured and assembled in the USA. Because of the size and efficiency of our company, our products have the lowest total cost of ownership, while offering the highest quality scans and greatest portability.
